Comments: Provide any clarifying information, including number of fish observed, location of fish survey data, etc.

Observed numerous CO⁽²⁰⁺⁾ juveniles along this flat gradient stream, which averaged approx. 6 ft. in width. The main stream branched to the northeast and provides good anadromous rearing habitat and potential spawning habitat; A smaller rearing trib. (several CO observed) enters the main channel from the northeast. These streams are within a proposed logging unit (Klawock Heenya Corp. T.735, R.82 Unit KL-109) S.20
Attach a copy of a map showing location of mouth and upper points of each species, specific stream reaches identified for spawning or rearing, locations of barriers, such as falls. Attach a copy of the fish survey data, if available.
